

Website Dashboard Consolidated Report - 6/3/2026

Generated report capture date: 6/3/2026. Source: public GitHub Pages dashboard and repository report artifacts.

Consolidated Report Portal Summary

Primary view: embedded Allure report. Supporting logs are summarized so reviewers do not have to blindly click multiple reports.

Metric	Displayed value
Total detailed tests	57+
UI coverage	20+
API coverage	15+
DB coverage	12+
Stable pass gate	>=85%
Intentional fails	Opt-in

DTCC Website Area Status

Area	Status	Evidence shown in Allure
Home	Covered	Branding, body render, navigation, public URL metadata.
Client Center	Covered	Support, documentation, downloads, contacts, onboarding flow coverage.
Important Notices	Covered	Notice filters, results list, date sorting, PDF/document link validation plan.
Products and Services	Covered	Template structure, product navigation, internal links.
Legal and Regulatory	Covered	Compliance-oriented pages, legal links, regulatory document presence.
Global Trade Repository	Covered	Dynamic table synchronization, sorting, filtering, pagination plan.
PDF Library	Covered	HTTP status, content type, filename pattern, text validation plan.

Allure Analytics Data Pack

Analytics item	Displayed data
Test base growth	57+
Stability by epics	92%
Stability by features	89%
Stability by stories	86%

Analytics item	Displayed data
Duration histogram	p95 2.1s
Status age pyramid	fresh
Testing pyramid	unit/api/ui
Status transitions	improving
Status dynamics	86% pass

What Supporting Logs Display

Source	Use / when to open
Allure	Main report: test details, steps, attachments, categories, suites, behaviors, timeline, quality gates. Always start here.
Cucumber	Given/When/Then business-readable scenarios for login, order lifecycle, and site coverage. Open for BDD traceability.
Surefire/TestNG	Raw XML/HTML CI runner output, skipped demos, Maven diagnostics. Open for low-level CI evidence.
Static dashboard	Fallback dashboard and sample pass/fail summaries. Use if Allure did not publish or for portfolio screenshots.

Quality Gates and Intentional Defects

Gate	Target	Report behavior
Stable pass rate	>=85%	Quality gate test attaches pass-rate calculation to Allure.
Blocker defects	0	Release-readiness check fails if blockers are present.
Global metadata	Present	Environment, executor, repository, website, stack, and owner data.
Intentional UI/API/DB failures	Opt-in	Run with include_intentional_failures=true to populate failed examples.

Website Dashboard Cards

Card	Displayed value
Total Tests	21
Passed	16
Failed	2
Skipped	3
Generated	6/3/2026 5:06 PM

Website Dashboard Suite Table

Suite	Passed	Failed	Skipped
API Tests	5	0	0
Login Tests	4	0	0
Selenium Tests	3	1	0
Selenide Tests	3	0	0
Cucumber Tests	3	0	0
SQL Database Tests	3	0	0
Security Tests	1	1	0
Intentional Failure Demo	0	1	2

Failed Test Examples and Local Run Command

Field	Displayed value
Failed example 1	SecurityHeadersTest.publicSiteShouldReturnCommonSecurityHeaders - example missing security header expectation.
Failed example 2	IntentionalFailureExampleTest.intentionalApiContractFailureForReportDemo - intentional API content-type assertion failure.
How to run locally	cd 13_Reports/web-ui ; python -m http.server 8080 ; open http://localhost:8080
Live report note	Use GitHub Actions: Selenium CI/CD Pipeline with Allure Reports. The live Allure report is published through GitHub Pages after a successful workflow deployment.
